

Claude Architect			
Duration: 4 Days			
Day	Module	Topics	Hands-on / Outcome
Day 1	Claude Ecosystem & Enterprise Foundations	Introduction to Claude ecosystem, Claude.ai, Claude Cowork, Claude Code, Claude APIs, AWS Bedrock, Vertex AI, model selection (Haiku/Sonnet/Opus), responsible AI, governance, prompt safety, enterprise deployment strategy	Understand Claude ecosystem and enterprise adoption strategy
	Claude Cowork – Business Automation	No-code automation, desktop workflow automation, document processing, HR workflows, reporting automation, finance workflows	Build business automation workflows using Claude Cowork
	Enterprise Governance & Responsible AI	Constitutional AI, prompt injection prevention, privacy controls, audit logging, compliance concepts	Apply governance and responsible AI practices in enterprise use cases
	Labs	Product mapping exercise, workflow automation, HR onboarding automation	Create enterprise workflow automation scenarios
Day 2	Claude Code – Practitioner Level	Claude Code architecture, CLI-based AI coding, installation & setup, API authentication, IDE integrations	Configure Claude Code development environment
	AI-Assisted Development Workflows	Feature development, debugging, refactoring, codebase understanding, regression testing	Build APIs and debug real-world issues using Claude
	Prompt Engineering for Code	Structured prompts, XML prompts, iterative prompting, coding prompt design patterns	Create optimized prompts for software engineering tasks
	Developer Productivity Automation	Shell pipelines, log analysis, PR summaries, linting automation, merge conflict assistance	Automate developer workflows using Claude Code
	Labs	REST API creation, debugging exercise, prompt comparison workshop, git diff automation	Build AI-powered coding workflows
Day 3	Context Engineering & CLAUDE.md	CLAUDE.md, AGENTS.md, SKILL.md, coding standards, security constraints, reusable context design	Design enterprise-grade context engineering frameworks
	CI/CD & GitHub Integration	GitHub Actions, automated code reviews, changelog generation, build failure analysis	Integrate Claude into DevOps and CI/CD pipelines

	Multi-Agent Architecture	Orchestrator-worker patterns, specialist agents, parallel execution, human approval workflows	Design scalable multi-agent enterprise AI systems
	Enterprise AI Platform Architecture	Cost optimization, model routing, observability, token monitoring, internal developer platforms	Architect enterprise AI engineering platforms
	Labs	Enterprise CLAUDE.md creation, GitHub workflow automation, multi-agent architecture design, token cost estimation	Develop architect-level enterprise AI solutions
Day 4	Model Context Protocol (MCP)	MCP architecture, client-server model, tools/resources/prompts, enterprise integrations	Understand enterprise AI integration architecture
	Enterprise Integrations using MCP	GitHub, Slack, Jira, Google Workspace, Databases, Browser automation integrations	Connect Claude with enterprise systems and tools
	Custom MCP Server Development	MCP SDK, Python/TypeScript development, API wrapping, authentication, deployment models	Build custom enterprise MCP servers
	Security, Governance & Compliance	Access controls, audit logging, GDPR, HIPAA, SOC2, execution safety, prompt security	Implement secure enterprise AI governance models
	Capstone Project	Enterprise AI coding assistant platform architecture, CI/CD integration, governance model, multi-agent design	Deliver end-to-end enterprise Claude architecture solution
	Final Presentation	Architecture showcase and evaluation	Present enterprise AI platform solution
